

Abstract

The invention relates to a fiber nonwoven fabric (10) comprising several fiber layers having reinforcement fibers (2) extending in a preferential direction and/or several multiaxial nonwoven fabrics consisting of reinforcement fibers (2) of various contours, wherein the fiber layers (1) are fixed one under the other and/or placed in the multiaxial nonwoven one on top of the other along at least one area (6) before contouring. The invention relates to a method for the production of said nonwoven and to a method for the production of a component from said fiber nonwoven fabrics (10).
